This two-volume set aims to present as completely as possible the methods of statistical inference with special reference to their economic applications.

The reader will find a description not only of the classical concepts and results of mathematical statistics, but also of concepts and methods recently developed for the specific needs of econometrics.. The breadth of approaches and the extensive coverage of the two volumes provide for a thorough and entirely self-contained course in modern econometrics.. Volume 2 focuses on testing, confidence regions, model selection, and asymptotic theory.. It is a well-integrated textbook presenting a wide diversity of models in a coherent and unified framework.
